Forward Looking Statements

Caution Concerning Forward-Looking Statements:

This document contains “forward-looking statements” – that is, statements related to future, not past, events. In this context, forward-looking statements often address our expected future business and financial performance and financial condition, and often contain words such as “expect,” “anticipate,” “intend,” “plan,” “believe,” “seek,” “see,” or “will.” Forward-looking statements by their nature address matters that are, to different degrees, uncertain. For us, particular uncertainties that could cause our actual results to be materially different than those expressed in our forward-looking statements include: current economic and financial conditions, including volatility in interest and exchange rates, commodity and equity prices and the value of financial assets; potential market disruptions or other impacts arising in the United States or Europe from developments in the European sovereign debt situation; the impact of conditions in the financial and credit markets on the availability and cost of General Electric Capital Corporation’s (GECC) funding and on our ability to reduce GECC’s asset levels as planned; the impact of conditions in the housing market and unemployment rates on the level of commercial and consumer credit defaults; changes in Japanese consumer behavior that may affect our estimates of liability for excess interest refund claims

(GE Money Japan); pending and future mortgage securitization claims and litigation in connection with WMC, which may affect our estimates of liability, including possible loss estimates; our ability to maintain our current credit rating and the impact on our funding costs and competitive position if we do not do so; the adequacy of our cash flow and earnings and other conditions which may affect our ability to pay our quarterly dividend at the planned level; GECC’s ability to pay dividends to GE at the planned level; our ability to convert pre-order commitments into orders; the level of demand and financial performance of the major industries we serve, including, without limitation, air and rail transportation, energy generation, real estate and healthcare; the impact of regulation and regulatory, investigative and legal proceedings and legal compliance risks, including the impact of financial services regulation; our capital allocation plans, as such plans may change and affect planned share repurchases and strategic actions, including acquisitions, joint ventures and dispositions; our success in completing announced transactions and integrating acquired businesses; the impact of potential information technology or data security breaches; and numerous other matters of national, regional and global scale, including those of a political, economic, business and competitive nature. These uncertainties may cause our actual future results to be materially different than those expressed in our forward-looking statements. We do not undertake to update our forward-looking statements.

“This document may also contain non-GAAP financial information. Management uses this information in its internal analysis of results and believes that this information may be informative to investors in gauging the quality of our financial performance, identifying trends in our results and providing meaningful period-to-period comparisons. For a reconciliation of non-GAAP measures presented in this document, see the accompanying supplemental information posted to the investor relations section of our website at www.ge.com.”

“In this document, “GE” refers to the Industrial businesses of the Company including GECC on an equity basis. “GE (ex. GECC)” and/or “Industrial” refer to GE excluding Financial Services.” GE’s Investor Relations website at www.ge.com/investor and our corporate blog at www.gereports.com, as well as GE’s Facebook page and Twitter accounts, contain a significant amount of information about GE, including financial and other information for investors. GE encourages investors to visit these websites from time to time, as information is updated and new information is posted.

GE Software

GE Software relies on a sustained effort in technological innovations and extensive experience in sensors & instrumentation, modeling, advanced analytics and software development to deliver outcomes to customers that drive the Industrial Internet.

Building a Silicon Valley presence

Focused on software & analytics

Workforce of 500+ people hired in 2 years

Targeting workforce of 1000 people

Award winning facility

Gold LEED

Open architecture & state of the art design

Shared services

Innovation driven approaches such as lean start up, agile development and extreme programming

GE digital architecture for industrial solutions

Inspection

Repair

Performance

Machine Life

How is it doing.

What is it telling me.

What does it look like.

Fix it at site or shop.

How does it perform.

How long will it last Without failure

Data and Analytics

GE Predictivity™

Common Platform

+

Predictivity Services

=

Outcomes that matter

Platform Capabilities

- Analytics
- Big data
- Asset mgmt.
- Mobility
- Cloud mgmt.

Asset Optimization

(Striving for zero unscheduled downtime!)

- Condition Based Maintenance
- Parts inventory management
- Monitoring & diagnostics

- Lower inventory costs
- Lower maintenance costs
- Lower asset capex costs
- Striving for zero unscheduled downtime

Infrastructure Capabilities

+

- Devices
- Data storage
- Controls
- Security
- Network

Operations Optimization

(Air traffic control for your industry!)

- Higher network throughput
- Controls & plant management
- Fuel use minimization

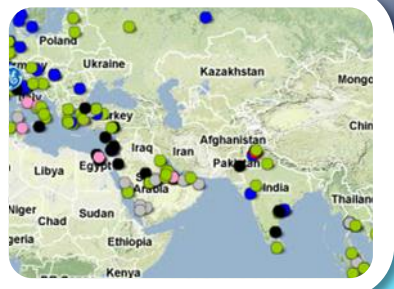

=

- Lower fuel cost
- Lower opex cost
- Increased revenue

Value of Big Data Analytics

1 gas turbine compressor blade monitoring potential: 500 gigabytes per day

How Do You Define Brilliance?

GLOBAL, OPEN ECOSYSTEM OF CONNECTED MACHINES THAT COMMUNICATE AND COOPERATE WITH PEOPLE

Farm to Grid

When the grid needs more voltage, wind farms take action. Every second, 150,000 data points on a farm are analyzed to integrate 400MW onto the grid.

Wind Farm to Wind Farm

Farm to farm communication allows automated control of a wind farms' voltages to the grid, providing stability to a broader regional area through optimizing multiple farms.

Turbine to Turbine

If a turbine loses wind speed or wind direction, it simply asks its neighbor what it's doing and replicates the action, improving availability and power output.

Turbine to Battery

Battery storage makes predictable power a reality, driving wind farm output, improving service productivity and creating new revenue streams for customers.

Turbine to Remote Monitoring

GE turbines are monitored and analyzed 24x7 using 150+ unique software rules to detect, prioritize, and identify the best fix for wind turbine operation issues.

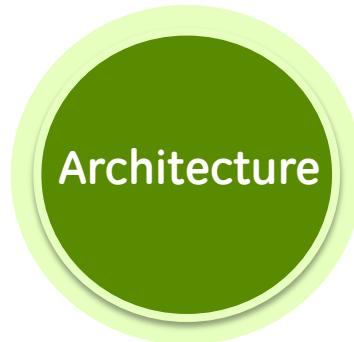

Why GE?

Our Approach

- Building a Silicon Valley presence
- Defining and developing Industrial Internet services
- Centers of Excellence: data science & design experience
- Stamping lean and agile best practices on global development hubs
- Creating leadership program

- New techniques & advances in analytics, esp. machine learning & statistics
- Hybrid cloud platform for services development & delivery
- Next-generation M2M & control technology
- GE user experience tool set
- Analytics centered applications

- Strategic partnerships for key infrastructure
- Strategic investment for innovative and emerging technologies
- Partner to pursue new markets
- Enable customers to create new solutions

Accenture

KEY PARTNERS

Amazon

Pivotal

What does this all mean?

- Disruption is occurring in every industry – Analog to Digital
- The benefits of intelligent systems are vast & the synergistic effects of widespread machine instrumentation can be realized across fleets & networks
- Software coupled with new processing architectures are the enabler for these digital industries
- R&D is critical to lead the change: not just new products but new solutions, systems & architectures

Thank you.

GE imagination at work
