M2 Series 5 Titanium Ti-6242

Parameters for GE Additive’s Concept Laser M2 Series 5

Data in this material datasheet represents material built with 30 µm layer thickness in an argon atmosphere on a Concept Laser M2 Series 5 single-laser or dual-laser machine and requires build plate heating. Values listed are typical.

Titanium Ti-6242

Titanium alloy Ti-6Al-2Sn-4Zr-2Mo-0.08Si (Ti-6242) has a chemical composition et al. according to AMS 4919. Ti-6242 is a near-alpha alloy and combines high mechanical strength, weldability, high temperature stability and creep resistance up to temperatures of 550 °C (versus approximately 400 °C for Ti-6Al-4V).

Ti-6242 is used to manufacture lightweight production parts where high temperature stability is critical. Examples from the aerospace industry include turbine components, afterburner structures and various applications in the hot zone of the airframe.

M2 Series 5 Ti-6242

The novel Ti-6242 parameters have recently been developed for the Concept Laser M2 Series 5 machine. The base parameter is a 30 µm parameter that produces surface roughness less than 10 µm without bead blast or shot peening. Moreover, the microstructure shows extremely low amount of porosity without appearance of cracks. The parameter has outstanding tensile properties, exceeding the limits for conventionally processed Ti-6242 according to AMS4919J in the stress-relieved state.
With appropriate approval, Ti-6Al-2Sn-4Zr-2Mo-0.08Si (Ti-6242) can be used for the production of lightweight components in the field of motorsport and aerospace industries where it is used in jet compressors and airframe structures.

Data in this material datasheet represent material built with 30 µm layer thickness in an argon atmosphere on a Concept Laser M2 Series 5 single-laser or dual-laser machine and requires build plate heating. Values listed are typical.

**POWDER CHEMISTRY**

Ti-6242 powder chemical composition according to AMS 4919. For additional information on Ti-6242 powder, visit [https://www.advancedpowders.com/powders/titanium/ti6242](https://www.advancedpowders.com/powders/titanium/ti6242).

**MACHINE CONFIGURATION**

- Concept Laser M2 Series 5 (single-laser or dual-laser)
- Argon gas
- Steel recoater blade

**AVAILABLE PARAMETERS**

- **Base Parameter 184**

  30 µm layer thickness, steel recoater

**THERMAL STATES**

1. As-Built
2. Stress Relief (SR)
   - SR: 900°C, 1 hour in argon, furnace cooling

**THERMAL STATE COMPARISON**

Spider Plot is generated by normalizing typical material data (containing both horizontal and vertical data) against a range defined for each material family. For Ti-6242, the ranges are as follows: UTS: 600-1250 MPa, 0.2%YS: 500-1100 MPa, Elongation: 0-20%, Density: 99-100%, Productivity: 5-30 cm³/h, Surface Quality (all): 50-5 µm
