

# VSV Remote Monitoring

## Product Description

- The Variable Stator Vane (VSV) is part of the High Pressure Compressor (HPC) assembly and thus difficult to access.
- A Linear Variable Differential Transducer (LVDT) system can be installed allowing remote monitoring of Variable Stator Vanes (VSV) positions.
- The LVDT will be mounted on the Compressor Front Frame (CFF) at approximately the 9 o'clock position.
- LVDT is mechanically connected to the VSV union ring by a pin and a clevis arrangement.
- Union ring movement will send a signal back to the operator through the LVDT.
- **Installation will include:**
  - LVDT transducer and hardware.
  - Remote signal conditioner and hardware.
  - Cable between signal conditioner and LVDT.
  - Modified control system and HMI screen software.

## Customer Value

- VSV is present to maximize efficiency over a wide range of air speeds.
- Proper monitoring of VSV position with LVDT allows the VSV to function more efficiently.
- LVDT position allows remote monitoring and accurate position of VSV to be known at all times.
- LVDT signal can be used for data or alarm processing.

## Applicable Units:

LM6000		LM2500	✓
LMS100		LM5000	
LM1600		TM2500	

GE's global service network provides life cycle support for more than 3,500 aeroderivative gas turbines worldwide to help you meet your business challenges and success metrics – anywhere and anytime. Our global service network connects with you locally for rapid response to your service needs.
