The demands of today’s power generation industry are many: low cost of electricity, dispatch volatility, along with high efficiency, reliability, and asset availability. With approximately 900 installed units producing ~150 GW of power in 12 countries, GE’s 7F gas turbine is a proven performer in all these areas. Among its features, the 7F provides 98.6 percent reliability, which enables five to six more days of operation per year than the industry average.
