

Gas Turbine Refurbished Capital Parts Program

GE gives you a choice. We offer new genuine GE parts to meet your heavy-duty gas turbine needs, but with our one-stop OEM offering, we also give you the option to save money and time with GE's most cost-effective refurbished parts. These provide a valuable alternative to buying new capital parts or extending your outage duration while parts are being repaired. We'll work with you to help you choose either new parts or lower-cost refurbished components to suit your needs and applications.

Designed to let you meet your plant maintenance and remaining life requirements, this program offers financial flexibility while maintaining the performance, configuration, and integrity of your GE turbine.

Parts Exchange Program

Why spend valuable time repairing or reselling your used parts when they can simply be shipped to GE as exchange credit for your parts purchase? GE offers you maximum value for your time and money. In addition, GE will accept third-party and independent service provider (ISP) repaired hardware.

TRUEPART Refurbished Program - Genuine GE Parts

In addition to potential cost savings, one of the best features of our refurbished capital parts program is that we only offer Genuine GE parts, which meet strict specifications for precise compatibility with your GE turbine.

What's more, you can count on your turbine to perform as expected, with the same warranty coverage for new and refurbished parts.

Reducing costs and outage duration

GE has a full range of refurbished capital parts in stock. This can translate to fewer spare parts in your inventory and cost savings for you. In addition, selecting refurbished parts helps you avoid longer repair cycle times and shorten outage durations.

To further enhance your outage, our sales team will work with you to plan ahead for the new and refurbished parts you will need.

Features	Benefits
Genuine GE parts designed specifically for use in your heavy-duty gas turbine	Maintain the performance and configuration integrity of your unit with OEM-assured quality and durability.
Replacement parts ready when you need them	No need to wait for existing parts repairs during a maintenance outage. Our in-stock new and refurbished parts offer the potential for significant reductions in outage duration and added outage planning flexibility.
Pay only for the part life you need	Competitive pricing for refurbished parts is based on remaining part life expectation.
Replace-in-kind assurance	Like-for-like parts replacement is provided when available. When like parts are not available, a technical evaluation is performed to ensure form, fit, and function.
Parts Exchange Program	Lower lifecycle cost by obtaining returned part credit at time of purchase. Reduce onsite inventory and leverage the benefit of GE's global inventory of refurbished parts.

Find out how much our refurbished capital parts program can save your business

Looking to reduce capital costs and minimize outage duration while preserving the integrity of your heavy-duty gas turbine? To find out how this innovative program can positively impact your bottom line, contact your GE sales representative.

What is covered?

Available to ship globally, our refurbished capital parts program supports 5, 6B, 7E, 9E, 6F, 7F, and 9F heavy-duty gas turbine combustion system components (combustion liners, transition pieces, caps, fuel nozzles, and entire systems) and hot gas path components (blades, shrouds, and power nozzles).
