About the Mechanical Integrity Work Process

The *Mechanical Integrity Work Process* is focused on mitigating the risk of loss of containment by implementing condition assessment activities. The Mechanical Integrity Work Process consists of the steps that are outlined in the following table.

Step	Description	Details
1	Collect or update equip- ment and location data.	Allows you to gather the data that is required to perform a degradation mechanism review, cal- culate risk, and plan and execute the appropriate activities.
2	Identify potential degrad- ation mechanisms.	Allows you to identify and quantify the types and locations of degradation that are occurring in your equipment and their components. After doing so, the probability of failure can be cal- culated so that you can plan effective activities.
3	Perform a risk analysis.	Allows you to calculate risk for equipment and their components so that you can optimize and prioritize the condition monitoring activities that will help mitigate the risks.
4	Define a mitigation strategy.	Allows you to use risk results and strategy rules to generate recommendations to mitigate risk.
5	Execute the strategy.	Allows you to perform recommended inspection or test activities so that you can mitigate the risk associated with each potential degradation mech- anisms.
6	Evaluate and com- municate results.	Allows you to evaluate existing data to obtain bet- ter information about a piece of equipment's or location's condition so you can reduce uncer- tainty and risk.

The following image shows an illustration of how *all* the steps in the Mechanical Integrity Work Process relate to one another. Each step in the work process is represented by a red circle. In addition, you can see that the entire work process is built upon the APM Foundation Work Process, whose components are represented by the blue boxes.

Within the Meridium APM product, each of the steps listed above can be accomplished using one or more of the following modules:

- Risk Based Inspection (RBI)
- Inspection Management
- Thickness Monitoring (TM)
- <u>NR13</u>

Mechanical Integrity System Requirements

Multiple licenses are required to take advantage of Mechanical Integrity modules. In addition to the following licenses, your system must contain the basic Meridium APM system architecture:

- Risk Based Inspection (RBI)
- Inspection Management
- Thickness Monitoring (TM)
- <u>NR13</u>

After you have configured the basic system architecture and licensed these modules, you will need to perform configuration steps for each module.

First-Time Deployment Workflow

Deploying and configuring the Mechanical Integrity Work Process for the first time includes completing multiple steps, which are outlined in the table in this topic. *All* of the steps are required to fully implement the Mechanical Integrity Work Process. These steps provide all the information that you need to deploy and configure Mechanical Integrity with the basic Meridium APM system architecture.

Step	Task
1	Configure the Risk Based Inspection module.
2	Configure the Inspection Management module.
3	Configure the Thickness Monitoring module.

Upgrade Workflow

You can upgrade to 3.6.1.5.0 using the instructions that are provided in the Installation, Upgrade, and Configuration documentation for each Mechanical Integrity module:

- Risk Based Inspection
- Inspection Management
- Thickness Monitoring

Mechanical Integrity User Instructions

With the exception of <u>instructions on using the navigation bar</u> that is displayed on various pages in Mechanical Integrity modules, the user instructions for Mechanical Integrity modules are provided in the documentation for the related module. Documentation for the Mechanical Integrity dashboard is provided in the <u>Mechanical Integrity Reference</u> <u>Information documentation</u>.

About Navigating Mechanical Integrity Modules

In place of the site map, a *navigation bar* is provided on various pages throughout Mechanical Integrity (MI) modules and allows you to:

- Select the records that you want to work with on various pages throughout MI modules.
- Navigate to various pages and features within and across MI modules.

```
    RBIT-UNIT-A RBISYS-880 HXST 46
    Mechanical Integrity Define DMs and Perform Risk Analysis RBI Analysis
```

The navigation bar displays the following levels:

- <u>Record</u>
- Work Process

Hierarchy Level

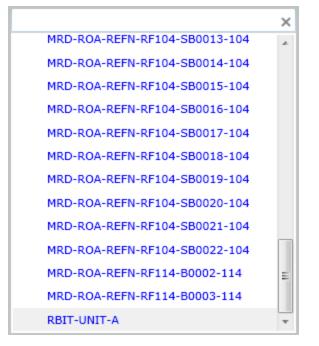

The record level of the navigation bar displays options that correspond with the records that you are working with on the current page. A red outline has been added to the following image to highlight the record level of the navigation bar.

```
    RBIT-UNIT-A RBISYS-880 HXST 46
    Mechanical Integrity Define DMs and Perform Risk Analysis RBI Analysis
```

The record level is <u>displayed only on certain pages throughout MI modules</u>. The text that is displayed for each option will vary, depending upon the record that you select for that option. The documentation refers to these options and the lists that are displayed when you click the **>** button that is displayed to the left of each option using the following terms:

 Unit: Displays a list of the Functional Location records in your database whose Is a Unit? field is set to *True* and the value *Undefined Unit*. When you access a <u>page</u> <u>that displays the navigation bar</u> for a record that is not linked to one of these Functional Location records, the value *Undefined Unit* is selected in this list by default. The Unit option and list are enabled *only* when the RBI license is active.

The image at the beginning of this topic shows the Functional Location record *RBIT-UNIT-A* specified for the **Unit** option, and the following image shows this same record selected in the **Unit** list.

- RBI System:
 - Displays a list of all RBI System records in your database that are linked to the Functional Location record selected in the Unit list and to which one or

more Criticality Calculator RBI Components record is linked.

-*or*-

 Displays the text Undefined System if the value Undefined Unit is selected in the Unit list or an RBI System record is not linked to the Functional Location record that is selected in the Unit list.

When you select in the **Unit** list a Functional Location record that is linked to only one RBI System record, the RBI System record is selected in the **RBI System** list automatically. The **RBI System** option and list are enabled *only* when the RBI license is active.

The image at the beginning of this topic shows the RBI System record *RBISYS-880* specified for the **RBI System** option, and the following image shows this same record selected in the **RBI System** list.

RBISYS-880
RBISYS-837
RBISYS-885

- **Equipment:** Displays the following lists, depending upon whether or not the RBI license is active:
 - When the RBI license is active, displays a list of all Equipment records in your database that are linked:
 - To the RBI System record that is selected in the **RBI System** list.

-or-

- Directly to the Functional Location record selected in the **Unit** list when an RBI System is not selected in the **RBI System** list.
- When the RBI license is not active, displays a list of all Equipment records in your database.

When a value is not selected in the **Equipment** list, the text *(Select Asset)* is displayed.

The image at the beginning of this topic shows the Equipment record *HXST* specified for the **Equipment** option, and the following image shows this same record selected in the **Equipment** list.

10006120
10006120
HXST 46

Throughout the documentation, the lists that are displayed for navigation bar options are referred to using the name of the corresponding option. For example, the lists that are displayed for the **Unit**, **RBI System**, and **Equipment** options are referred to as the **Unit**, **RBI System**, and **Equipment** lists respectively.

For each list that displays *more than* ten records, a text box is displayed above the list that you can use to search for records in the list. To the right of the text box, the \boxtimes button is displayed and clears any text that you have typed in the text box. The image of the **Unit** list in this topic shows an example of this text box.

Work Process Level

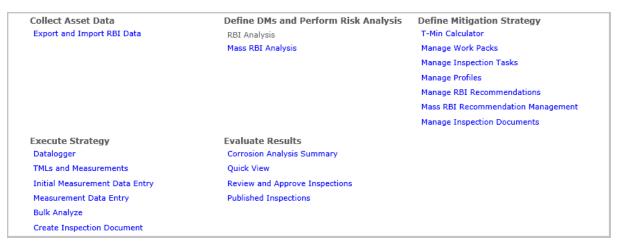

The Work Process level of the navigation bar displays options that correspond with the Mechanical Integrity Work Process. Specifically, this level displays options that correspond with the step in the Mechanical Integrity Work Process that is associated with the page that you are currently viewing. A red outline has been added to the following image to highlight the Work Process-level of the navigation bar.

When the <u>record level</u> of the navigation bar is displayed, the Work Process level of the navigation bar is displayed *below* the record level, as shown in the preceding image. The text that is displayed for each option will vary, depending upon your selection for that option. The documentation refers to these options and the submenus that are displayed when you click the **)** button that is displayed to the left of each option using the following terms:

- Work Process: Displays the text *Mechanical Integrity*, which indicates that the Mechanical Integrity Work Process is associated with this level of the navigation bar. This option is always disabled.
- Work Process Step: Displays text that corresponds with the step(s) in the Mechanical Integrity Work Process that are associated with the page that you are currently viewing, and displays a <u>submenu of links</u>, organized according to the steps in the Mechanical Integrity Work Process.

The following image shows an example of the **Work Process Step** submenu that is displayed when you are working on the **RBI Asset View** or **RBI Unit View** page.

The following text that corresponds with the following step(s) in the Mechanical Integrity Work Process can be displayed for the **Work Process Step** option.

Text displayed for Work Process Step option	Corresponding step(s) in the Mech- anical Integrity Work Process
Collect Asset Data	Collect or Update Asset Data
Define DMs and Perform Risk Analysis	Identify Potential Degradation Mech- anisms Perform Risk Analysis
Defined Mitigation Strategy	Define Mitigation Strategy
Execute Strategy	Execute Strategy
Evaluate Results	Evaluate and Communicate Results

In image at the beginning of this topic, the Work Process step *Define DMs and Perform Risk Analysis* is specified, (i.e., the text *Define DMs and Perform Risk Analysis* is displayed for the **Work Process Step** option).

• Task: Displays text that corresponds with the task that you are completing for the specified step in the Work Process, and displays a submenu of links that correspond with that step in the Work Process. The text that is displayed for the Task option corresponds with the labels of each hyperlink that is displayed on the Work Process Step submenu.

In the image at the beginning of this topic, the task *RBI Analysis* is specified, (i.e., the text *RBI Analysis* is displayed for the **Task** option).

The following image shows an example of the **Task** submenu that is displayed when the Work Process step *RBI Analysis* is specified.

RBI Analysis Mass RBI Analysis

Throughout the documentation, the submenus that are displayed for navigation bar options are referred to using the name of the corresponding option. For example, the submenus that are displayed for the **Work Process Step** and **Task** options are referred to as the **Work Process Step** and **Task** submenus respectively.

Pages that Display the Navigation Bar

Various pages throughout Mechanical integrity modules display the navigation bar. The <u>record hierarchy level</u> of the navigation bar is displayed only on some pages, but it is displayed only *after* you have selected records that correspond with this level of the navigation bar. Additionally, when you are working on pages that are not specific to the records represented on the record level of the navigation bar, this level is disabled.

The following table lists the pages, organized by module, on which the <u>navigation bar</u> is displayed, whether or not the record level is displayed after you have selected to work with records that correspond with this level of the navigation bar, and whether or not the record level is enabled when it is displayed.

About Navigation Bar Submenus

Navigation to various areas within and across Mechanical Integrity modules using the <u>Work Process Step</u> and <u>Task submenus</u> are determined by license activation and security permissions. As such, the links that appear on these submenus are conditionally enabled according to the following criteria:

- In order for *any* link to be enabled, the license for the module that corresponds with that link must be *active*.
- In order for *certain* links to be enabled, in addition to the license for the corresponding module being active, the appropriate security permissions must be associated with your Security User account.
- The link that corresponds with the page that you are currently viewing will always *disabled*.

The documentation assumes that all Mechanical Integrity users are assigned to the MI Everyone Security Group *at a minimum*. The following table provides details on:

- The links that appear on the **Work Process Step** and **Task** submenus, organized according to the applicable step in the Mechanical Integrity Work Process.
- The corresponding page or feature to which the links provide access.
- The type of permissions that you must have to entity and relationship families, (beyond what is provided via membership in the MI Everyone Security Group), unless otherwise noted, in order to access the page or feature.
- Whether or not the link is conditionally enabled based upon the security permissions associated with your Security User account. When you click a link that is associated with a page or feature to which you do not have the necessary security permissions, an error message is displayed, indicating that you do not have the necessary security permissions to access the page or feature.

To use the full functionality of this page.

About Using the Navigation Bar

Depending upon your security permissions and which MI module licenses are active, you can use the <u>navigation bar</u> to:

- <u>Select the records that you want to work with on various pages throughout MI</u> modules.
- Navigate to various pages and features within and across MI modules.

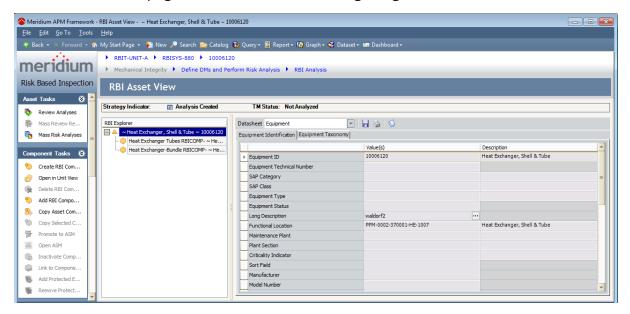

The documentation assumes that the following licenses are active, and that you have the <u>necessary security permissions</u> to access all pages and features available via the navigation bar:

- Risk Based Inspection
- Inspection Management
- Thickness Monitoring

Selecting Records That You Want to Work With In MI Modules

You can use the record level of the navigation bar to select the records that you want to work with on <u>various pages throughout MI modules</u>.

For example, suppose that you are working with the RBI Analysis that is associated with the Equipment record *10006120* that is linked to the RBI System record *RBISYS-880* on the **RBI Asset View** page, as shown in the following image.

Now, suppose that you want to work with the RBI Analysis that is associated with the Equipment record *HXST 46* that is linked to the RBI System record *RBISYS-880*. Using the record level of the navigation bar, you could select the Equipment record *HXST 46* in the **Equipment** list, and the **RBI Asset View** page will be refreshed to display information for that Equipment record, as shown in the following image.

Selecting Records That You Want to Work With In MI Modules

•	RBI Asset View - ~ NO.1 STEAM REHEATER ~ H	(ST 46		- • •

The following instructions assume that you are viewing a <u>page that displays the navigation bar</u>.

To select records that you want to work with in MI modules:

• On the record level of the navigation bar, in the lists displayed for the **Unit**, **RBISystem**, or **Equipment** options, select the records that you want to work with on the current page.

The page is refreshed according to your selections.

Navigating Within and Across Modules

You can use the <u>navigation bar</u> to navigate to other pages and features within and across Mechanical Integrity modules.

For example, suppose that you are working with the RBI Analysis that is associated with the Equipment record *10006120* on the **RBI Asset View** page, as shown in the following image.

😵 Meridium APM Framework - RBI Asset View - ~ Heat Exchanger, Shell & Tube ~ 10006120					- • •

The following instructions assume that you are viewing a <u>page that displays the navigation bar</u>.

To navigate within and across modules:

• On the Work Process level of the navigation bar, on the **Work Process Step** or **Task** submenus, click the <u>link that corresponds with the page to which you want to</u> <u>navigate</u>.

The page that corresponds with the link that you clicked is displayed.

Accessing the Mechanical Integrity Dashboard

The <u>Mechanical Integrity dashboard</u> serves as an example of how you can configure a dashboard to display information about pieces of equipment and locations that you analyze in Mechanical Integrity modules.

To access the Mechanical Integrity dashboard:

• On the Meridium APM Framework main menu, click **Go To**, point to **Mechanical Integrity**, and then click **Dashboard**.

The Mechanical Integrity dashboard is displayed on the **Dashboard** page.

Aspects of the Mechanical Integrity Dashboard

The Mechanical Integrity dashboard serves *solely* as an example of how you can configure a dashboard to display information about equipment and locations that you analyze in Mechanical Integrity modules. It is expected that all customers will configure the Mechanical Integrity dashboard to suit their individual needs. The documentation does not provide additional details on configuring the Mechanical Integrity dashboard, however, details on working with dashboards in general, the <u>type of sections that are displayed</u> on the Mechanical Integrity dashboard, and the <u>underlying queries</u> that are used to determine their content are provided. You can use this documentation as a starting point for customizing the Mechanical Integrity dashboard, if desired.

Sections Displayed on the Baseline Mechanical Integrity Dashboard

type of dashboard section that corresponds with each section that is displayed on the Mechanical Integrity dashboard.

Baseline Mechanical Integrity dashboard section	Section type
Equipment Measures	Measures - Linked
Equipment Outside Risk Policy	List - Single Column
General Measures	Measures - General
Inspection Group Monitor	Measures - General
Pending RBI Recommendations	List - Summary
RBI Risk Matrix	RBI Risk Matrix Note: This section is specific to the Mech- anical Integrity dashboard.

Inspection Strategy

Records in the Inspection Strategy family store information and guidelines for performing various types of inspections on equipment and locations that you analyze using the RBI and Inspection modules. Some Inspection Strategy values are used to populate values in:

- RBI Recommendation records that are generated automatically in the RBI module.
- Inspection records that are used in the Inspection module.

The following table provides a list and description of the fields that exist in the Inspection Strategy family. The information in the table reflects the baseline state and behavior of these fields.

Field	Data Type	Description	Behavior and Usage
Inspection Con- fidence	Character	A value that indic- ates how effective prior inspections were at identifying	This field is populated with a list of System Codes that are stored in the INSPECTION CONFIDENCE System Code table.
		the degradation mechanism and the rate of degrad- ation.	The value in this field is populated in the Inspection Confidence field in Inspection records whose:
			• Type of Inspection value cor- responds with the value in the Inspection Task Type field in the Inspection Strategy record.
			• Extent value corresponds with the value in the Inspection Extent field in the Inspection Strategy record.
Inspection Extent	Character	The extent to which the inspec- tion was per- formed.	This field is populated with a list of System Codes that are stored in the MI_INSPECTION_EXTENT System Code table.
Inspection Strategy Description	Character	A description of the inspection.	The value in this field is populated in the Recommendation Basis field in RBI Recommendation records that are generated automatically.

Field	Data Type	Description	Behavior and Usage
Inspection Strategy ID	Character	The Record ID of the Inspection Strategy record.	You must specify a unique value in this field. This value is used to identify the Inspection Strategy record.
Inspection Task Type	Character	The type of inspec- tion that cor- responds with the Inspection Strategy record.	This field is populated with a list of all Task Types records whose Refer- ence field contains the value <i>Inspec-</i> <i>tion Strategy (INSPECTION_</i> <i>STRATEGY)</i> .
			The value in this field is populated in the:
			 Task Type field in RBI Recom- mendation and Inspection Task records.
			Type of Inspection field in Inspection records.
Recommended Inspection Interval	Number	The interval at which the inspec- tion should be per- formed.	When the Use Calculated Data field is set to <i>False</i> , the value in this field is used to populate the Recom- mended Interval Scope field in RBI Recommendation records that are generated automatically.

Field	Data Type	Description	Behavior and Usage
Recommended Inspection Scope	Text	 Information related to the scope of the inspection, includ- ing: A description of tasks that the inspector should per- form. The min- imum information that should be returned by the inspec- tion. Credentials that the inspector is required to have. 	The value in this field is populated in the Recommended Inspection Scope field in RBI Recommendation records that are generated auto- matically.
Use Calculated Data	Logical	 Determines how the Recommended Interval Scope field is populated in RBI Recommendation records that are generated auto- matically. True, the Recommended val Scope field in the RE Recommendation recor populated with the valu the Estimated Half Life the Criticality Int. Corr. Mech. Eval. record that linked to the associated Criticality Analysis record <i>False</i>, the value in the F mended Interval Scope populated with the valu the Recommended Interval Scope populated with the valu 	

About the Mechanical Integrity Catalog Folder Structure

The following topics contain information about the folders that are stored in the Catalog location \\Public\Meridium\Modules\Mechanical Integrity, their content, and details on how this content can be used by Mechanical Integrity (MI) users. This information is intended to serve as a quick reference to details that are provided elsewhere in the MI documentation.

- Dashboard Folder
- Queries Folder

Note: All of the Public folders exist by default. Any item in a Public folder is also available in the corresponding Baseline folder. Throughout this documentation, we refer to items in the Public folder.

Dashboard Folder

The dashboard listed in the following table is stored in the Catalog location \\Public\Meridium\Modules\Mechanical Integrity\Dashboard. In this table, the value listed in the **Dashboard** column refers to the dashboard *name.* The baseline dashboard caption is the same as the dashboard name.

Dashboard	Behavior and Usage
Mechanical Integrity Dash-	Displays the <u>baseline Mechanical Integrity dashboard</u>
board	on the Dashboard page.

About the Queries Folder

The Queries folder that is stored in the Catalog location \\Public\Meridium\Modules\Mechanical Integrity contains the following subfolders:

- <u>Navigation Bar Queries</u>
- Dashboard Queries

Navigation Bar Queries Folder

The queries listed in the following table are stored in the Catalog location \\Public\Meridium\Modules\Mechanical Integrity\ Queries\Navigation Bar Queries. In this table, the values listed in the **Query** column refer to the query *names*. The baseline query captions are the same as the query names.

Query	Behavior and Usage	
All Assets	Returns all Equipment records in your database. The results of this query are used to populate the Equipment list that is accessed via the <u>navigation bar</u> when the Risk Based Inspection license is not active.	
Assets in Hier- archy	Returns the following items, depending upon the types of records that you have created:	
	 Functional Location, RBI System, and Equipment records that are linked to one another. 	
	-or-	
	• Functional Location and Equipment records that are linked to one another but are not linked to RBI System records.	
	-or-	
	 Equipment records that are not linked to RBI System or Functional Location records. 	
	The results of this query are used to populate the Unit , RBISys- tem , and Equipment lists that are accessed via the <u>navigation</u> <u>bar</u> when the Risk Based Inspection license is <i>active</i> .	

Dashboard Queries Folder

The queries listed in the following table are stored in the Catalog location \\Public\Meridium\Modules\Mechanical Integrity\Queries\Dashboard Queries. In this table, the values listed in the **Query** column refer to the query *names*. The baseline query captions are the same as the query names.

Query	Behavior and Usage	
Data Quality	Used to return results that are displayed for the Data Quality measure that is displayed in the General Measures section that is displayed on the <u>Mechanical Integrity dashboard</u> . In the baseline database, this query is configured to return Crit- icality Calculator RBI Components records whose Com- ponent Type value is any value other than <i>Heat Exchanger- Bundle</i> and when any of the following conditions related to other Criticality Calculator RBI Components values are true:	
	 Operating Pressure is null or is greater than Design Pressure. 	
	 Operating Temperature is null or is greater than Design Temperature. 	
	• Diameter is null or <i>0</i> (zero).	
	• Expected Internal Corrosion is null or <i>0</i> (zero).	
	Inventory is null.	
	Process Fluid is null.	
	• Weld Joint Effy is null.	
	 Nominal Thickness is null or 0 (zero). 	
	• Toxic Mixture is <i>True.</i>	
	Toxic Model is null.	
	• Percent toxic is <i>0</i> (zero).	
Degradation Rates	Used to return results that are displayed for the Degradation Rates measure that is displayed in the General Measures sec- tion that is displayed on the <u>Mechanical Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to Asset Corrosion Ana- lysis records whose Average Corrosion Rate value is <i>greater</i> <i>than</i> the BM Estimate Rate value in the Criticality Int. Corr. Deg. Mech. Eval. record associated with that Equipment record.	

Query	Behavior and Usage	
Environmental Con- sequence	Used to return results that are displayed for the Envir- onmental Consequence measure that is displayed in the Equipment Measures section that is displayed on the <u>Mech- anical Integrity dashboard</u> . In the baseline database this query:	
	 Is configured to return Equipment records that are associated with RBI Criticality Analysis records whose Environ Crack Prob Cat field contains a value other than N/A. 	
	 Contains a prompt on the Equipment Entity Key. 	
Equipment Outside Risk Policy	Used to return results that are displayed in the Equipment Outside Risk Policy section that is displayed on the <u>Mech- anical Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to RBI Criticality Analysis records whose Risk Category value corresponds with the value <i>High</i> in the Criticality Rating field.	
Flammable Con- sequence	Used to return results that are displayed for the Flammable Consequence measure that is displayed in the Equipment Measures section that is displayed on the <u>Mechanical Integ</u> - <u>rity dashboard</u> . In the baseline database, this query:	
	 Is configured to return Equipment records that are associated with RBI Criticality Analysis records whose Flamm Conseq Cat field contains a value other than N/A. 	
	Contains a prompt on the Equipment Entity Key.	
Inspections Com- pleted	Used to return results that are displayed for the Inspections Completed in Last 30 Days measure that is displayed in the General Measures section that is displayed on the <u>Mech- anical Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to Inspection records whose Completion Date field contains a value that corresponds with today's date or a date within the last 30 days.	

Query	Behavior and Usage	
Inspections Due	Used to return results that are displayed for the Inspections Due in Next 30 Days measure that is displayed in the Gen- eral Measures section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to Inspection Task records whose Next Date value corresponds with within the next 30 days.	
Inspections Over- due	Used to return results that are displayed for the Overdue Inspections measure that is displayed in the General Meas- ures section that is displayed on the <u>Mechanical Integrity</u> <u>dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to Inspection Task records whose Next Date value corresponds with today's date or a date before today's date.	
Pending Recom- mendations	Used to return results that are displayed in the Pending RBI Recommendations section that is displayed on the <u>Mech-anical Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are linked to RBI Recommendation records that are in the Pro- posed state.	
Percentage Change in External DM for Piping	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	 The number of Criticality Calculator RBI Components records in the database whose Component Type field contains any value that includes the word <i>Pipe</i>. -and- 	
	 The percentage of those Criticality Calculator RBI Components records whose CUI Inspection Priority Change field is set to <i>True</i>. 	

Query	Behavior and Usage	
Percentage Change in External DM for Tanks	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	 The number of Criticality Calculator RBI Components records in the database whose Component Type field contains the value Storage Tank. 	
	-and-	
	 The percentage of those Criticality Calculator RBI Com- ponents records whose CUI Inspection Priority Change field is set to <i>True</i>. 	
Percentage Change in External DM for Vessels	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	 The number of Criticality Calculator RBI Components records in the database whose Component Type field contains any of the following values: 	
	 Air Cooled Exchanger-Header 	
	 Column-Bottom 	
	 Column-Middle 	
	 Column-Top 	
	Filter	
	Heat Exchanger-Channel	
	 Heat-Exchanger-Shell 	
	Pressure VesselReactor	
	-and-	
	 The percentage of those Criticality Calculator RBI Com- ponents records whose CUI Inspection Priority Change field is set to <i>True</i>. 	

Query	Behavior and Usage	
Percentage Change in Internal DM for Piping	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	• The number of Criticality Calculator RBI Components records in the database whose Component Type field contains any value that includes the word <i>Pipe</i> .	
	-and-	
	 The percentage of those Criticality Calculator RBI Com- ponents records whose Int. Corr. Inspection Priority Change field is set to <i>True</i>. 	
Percentage Change in Internal DM for Tanks	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	 The number of Criticality Calculator RBI Components records in the database whose Component Type field contains the value Storage Tank. 	
	-and-	
	 The percentage of those Criticality Calculator RBI Com- ponents records whose Int. Corr. Inspection Priority Change field is set to <i>True</i>. 	

Query	Behavior and Usage	
Percentage Change in Internal DM for Vessels	Used to return results that are displayed in the Inspection Group Monitor section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return:	
	 The number of Criticality Calculator RBI Components records in the database whose Component Type field contains any of the following values: 	
	 Air Cooled Exchanger-Header 	
	 Column-Bottom 	
	 Column-Middle 	
	 Column-Top 	
	■ Filter	
	 Heat Exchanger-Channel 	
	 Heat-Exchanger-Shell 	
	 Pressure Vessel 	
	 Reactor 	
	-and-	
	 The percentage of those Criticality Calculator RBI Com- ponents records whose Int. Corr. Inspection Priority Change field is set to <i>True</i>. 	
Production Loss Consequence	Used to return results that are displayed for the Production Loss Consequence measure that is displayed in the Equip- ment Measures section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query:	
	 Is configured to return Equipment records that are associated with RBI Criticality Analysis records whose Production Loss Conseq Categ field contains a value other than N/A. 	
	 Contains a prompt on the Equipment Entity Key. 	
Recommendations Without Tasks	Used to return results that are displayed for the Comparison of Tasks to Recommendations measure that is displayed in the General Measures section that is displayed on the <u>Mech- anical Integrity dashboard</u> . In the baseline database, this query is configured to return Equipment records that are not linked to at least one Inspection Task record.	

Query	Behavior and Usage	
Risk Matrix	Used to return results that are displayed in the RBI Risk Matrix section that is displayed on the <u>Mechanical Integrity dash</u> <u>board</u> . In the baseline database, this query is configured to return Equipment records that are associated with an RBI Criticality Analysis record that is in the Risk Completed state <i>and</i> whose Risk Category field contains a value.	
Task Complete Greater Than Risk Assessment	Used to return results that are displayed for the Analyses Requiring Calculation measure that is displayed in the Gen- eral Measures section that is displayed on the <u>Mechanical</u> <u>Integrity dashboard</u> . In the baseline database, this query is configured to return RBI Criticality Analysis records that are:	
	In the Risk Completed State.	
	-and-	
	• Linked to an Inspection record whose Completion Date value corresponds with a date that is <i>after</i> the Date Criticality Calculated value in the RBI Criticality Analysis record.	
Toxic Consequence	Used to return results that are displayed for the Toxic Con- sequence measure that is displayed in the Equipment Meas- ures section that is displayed on the <u>Mechanical Integrity</u> <u>dashboard</u> . In the baseline database, this query is configured to return Equipment records that are associated with RBI Crit- icality Analysis records whose Toxic Conseq Cat field contains a value other than <i>N/A</i> .	

System Code Tables Used by MI Modules

The following System Code tables are used by Mechanical Integrity modules:

Table ID	Table Description	Function
INSPECTION CONFIDENCE	Inspection Con- fidence	Used to populate the Inspection Con- fidence list in <u>Inspection Strategy records</u> .
MI_ INSPECTION_ EXTENT	Extent values for Inspection Strategies	Used to populate the Inspection Extent list in <u>Inspection Strategy records</u> .

About NR13

NR13 is a Brazilian Regulatory Standard issued by the Department of Labor, applicable only to sites in Brazil. Its general purpose is to ensure safety in all aspects of designing, installing, operating, and maintaining certain types of equipment.

The NR13 module expands Meridium APM's baseline function to support the collecting and storing of technical data that is required to create NR13-compliant inspection reports. The module also adds two new inspection reports specifically for NR13 inspections.

The NR13 module is enabled by the NR13 license.

You can download the NR13 help documentation here: <u>https://www.me-ridium.com/secure/documentation/NR13/Meridium_APM_NR13_Module.pdf</u>
