

# Doing the Right Maintenance at the Right Time? If Not, Here's How You Can.

F&B/CPG

Disconnected systems, limited resources, and pressure to keep up with production demands can leave your food and beverage (F&B) and consumer packaged goods (CPG) manufacturing facility vulnerable to a variety of risks. That's why leading F&B and CPG companies are leveraging an asset performance management (APM) solution to remain competitive.

## Quality and safety risk

**Product quality and safety are critical concerns.**

By monitoring the health of your equipment and production lines, APM can help identify issues before they occur.

This helps eliminate vulnerabilities in the production lines—improving both product quality and output.

## Production risk

**Unplanned downtime costs \$8-15K/hour in F&B/CPG manufacturing.**

By keeping production lines up and running as expected, you can increase production while decreasing waste.

## Workforce risk

Globally, workers lack the digital tools they need to see critical data associated with equipment and production. Instead of leaning solely on domain expertise and manual work processes, leverage predictive analytics and continuous learning in APM to execute actionable insights that positively impact the bottom line.

## Compliance risk

In an increasingly regulated world, you must demonstrate the ability to quickly and easily manage your physical assets and effectively mitigate risk, resulting in higher quality products produced for your consumer.

## Big Data risk

Your assets and systems are talking. Are you listening? The ever-increasing numbers of connected devices have created a wave of big data that is overwhelming your systems and people, creating risk exposure along with great opportunity. The key to managing this is effective asset strategies that give context to data, turning it into actionable information, alerting you to asset health trends or real-time conditions that demand immediate attention.

It's time to become a digital industrial company.

### About GE Digital

GE Digital connects streams of machine and process data to powerful analytics and people, providing industrial companies with valuable insights to manage assets and operations more efficiently. World-class talent and software capabilities help drive digital industrial transformation for big gains in productivity, availability and longevity. It leverages Predix, the cloud-based operating system, purpose built for the unique needs of industry.
