

Expert on Alert for GE Drives

MAXIMIZE RELIABILITY, AVAILABILITY & MAINTENANCE EFFICIENCY

GE's Expert On Alert (EOA) system is a remote monitoring and diagnostic (RM&D) offering for GE's electric drive systems on mining haul trucks. This proven system continuously monitors the GE drive system operation, sends an alert if there is an anomalous event and then provides a simple step-by-step recommendation (RX) on how to effectively diagnose and fix the problem.

BENEFIT FROM GE'S EXPERIENCE...

GE Transportation's EOA RM&D system has been deployed in its locomotive business for over 20 years on over 16,500 locomotives world-wide, demonstrating significant customer value including improved reliability, availability and labor productivity. GE has adapted this proven system technology for the mining industry.

DIFFERENTIATING FEATURES

- Continuous learning system with high level analytical tools
- 24hr toll free access to a GE diagnostic specialist on three Continents
- SaaS model provides rapid access at low upfront cost

OPTIMIZED OUTCOMES

- Improved reliability and availability
- Reduced critical failures and unplanned downtime
- Reduced maintenance and repair costs
