

GE's Operations Performance Management

MAXIMIZE PRODUCTION AND MINIMIZE \$/TON

Optimize process performance and increase revenue, mine recovery and efficiency by consolidating and driving process and operational KPIs in real-time. GE Digital's Operations Performance Management is a complete control-to-cloud solution that accelerates deployment and enables anytime, anywhere access to critical data.

UNDERSTAND YOUR OPERATION

GE Digital's Operation Performance Management supports operational decision-making to rapidly respond to changing mining conditions. It provides accurate, clear, and complete situational awareness to help mining professionals maximize outcomes. Operations Performance Management leverages the power of GE Digital's industrial Predix™ platform to provide real-time operational intelligence on controls, site, fleet and enterprise levels.

DIFFERENTIATING FEATURES

- Instant access to consolidated operations, financial and regulatory data using Predix™, GE's Industrial Internet platform
- Rapid time-to-value using cloud technologies
- Customized and adaptive cyber-security solutions protect data
- Most extensive and advanced analytics catalog from the world's premier digital industrial company and ecosystem partners
- Single unified architecture from the sensor to the boardroom.

OPTIMIZED OUTCOMES

- Increased productivity, efficiency, and recovery
- Better decision-making via instant access to meaningful information
- Rapid response to changing process conditions for safer and more predictable operational performance
