

Expert-on-Alert

Core Capabilities

- Delivers real-time locomotive health checks and diagnostics
- Enables proactive part and resource planning
- Provides recommendations validated by experts that ensure problems are fixed correctly the first time

Differentiating Features

- Expert on Alert, coupled with GE Transportation shop management tools and expertise, ensures optimal performance of locomotive fleets

Optimized Outcomes

- Reduces mission failures and minimizes train delays
- Optimizes service shop loads by routing locomotives to desired repair shops before a problem forces an emergency decision
- Saves cost by enabling advanced planning of shop resource requirements

Optimized assets and centralized monitoring and diagnostics, in real time.

Looking for a better way to ensure reliable, trouble-free locomotive operation? Start tracking key performance data with a team of experts armed with the most advanced analytic tools.

Expert-on-Alert provides centralized monitoring of locomotive health status and performance in real time. Your locomotives transmit data to the GE monitoring and diagnostic center, where a team of experts analyzes control system status and performance data. This enables GE to determine the root cause of failures while in-transit, and provide timely maintenance and repair recommendations.

The result? Reduced mission failures. Minimized train delays. More efficient and proactive service routing.
