

GoLINC™

Core Capabilities

- Network switch/routing
- Dual LTE/4G wireless capability
- Dual Wi-Fi, integrated GPS
- Expandable applications processing
- Massive (8TB) network addressable storage
- Universal communications for GE and business apps
- Multiple high-definition video processing

Differentiating Features

- Modular, flexible and upgradeable platform—keeps pace with technology
- Allows user to configure, upgrade and view diagnostics of any module in the chassis
- Ruggedized for harsh environment and designed specifically for railroad environment

Optimized Outcomes

- Provides an expandable, reliable platform for hosting applications and transferring data
- GoLINC-hosted applications will improve locomotive and train operation

Boost productivity and enhance connectivity to make your data work harder.

Transferring data. Hosting applications. Interfacing with third-party systems. Now you have a communication and application management platform designed for the harsh railroad environment. Get ready to make every aspect of your operation work smarter.

GoLINC is an industry-tested network, communication and application management platform for the railroad environment. It is a mobile data center that provides robust processing, wireless communication, networking, video and data storage. GoLINC interfaces with both locomotive and third-party systems to make data available, and features onboard wireless capability for easier data transfer.

The result? Enhanced communication and improved productivity throughout your operation.
