

RailDOCS™

Configuration Management System (CMS)

Core Capabilities

- Manages component configurations and rule guidelines
- Integrated with signal maintenance activities
- Offers reporting access to information requested during regulatory activities

Differentiating Features

- Comprehensive repository of Railroad OEM product information
- Powerful user-specified compliance rule engine (Standards Guardian)
- Remote application built with the realistic use of its end users; hardened devices available for remote users

Optimized Outcomes

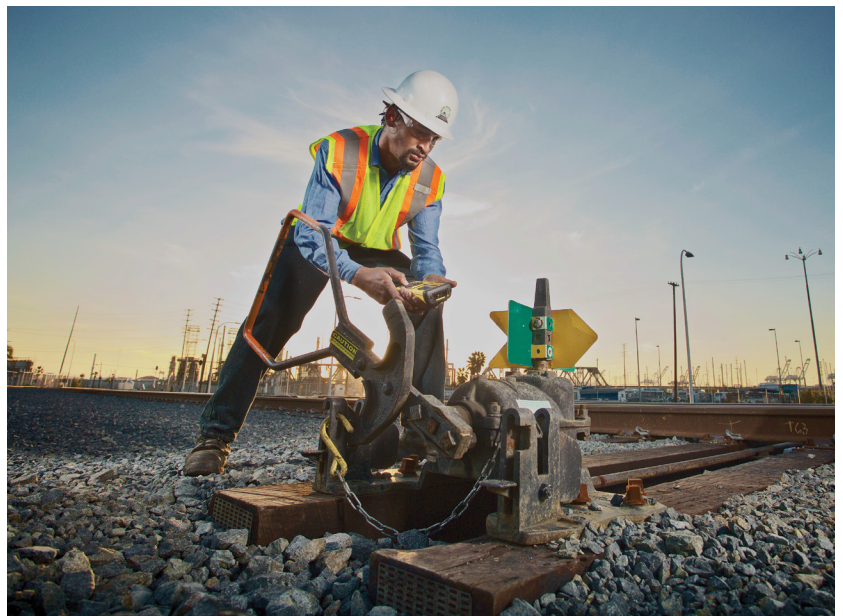

- Turnkey solution for managing wayside locations, on-board PTC equipment, spares, service bulletins, application software and plans
- Ensures regulatory compliance
- Provides an online, current view of your assets

Boost productivity while keeping track of your fixed and PTC on-board asset configurations.

Storing your assets' configurations goes way beyond regulatory compliance needs. A reliable asset repository optimizes convenience and increases reporting confidence.

Implementing a PTC plan necessitates tracking equipment that crosses multiple asset types. The **RailDOCS Configuration Management System (CMS)**, which includes OEM specifications on >1M components, provides users greater manageability for both wayside and on-board equipment.

The result? Convenient access, increased accuracy. Compliance within configuration management and data reporting. Optimized management of diverse assets.
