

GE Transportation's Digital Solutions

ShipperConnect™

Rail Track & Trace

Core Capabilities

- One provider for all railcar transportation information
- Railcar & inventory-in-transit visibility
- Proactive railcar exceptions
- Dynamic ETA
- Trip plan variance—plan vs. actual
- Common portal—one platform for easy access

Differentiating Features

- Aggregates over 9M car location messages across 550 railroads each year
- Integration with ERP systems
- Unlimited number of users
- 40+ business intelligence reports
- Quick implementation for SaaS

Optimized Outcomes

- Improve efficiency of load/unload logistics planning
- Minimize delay by responding earlier to railcar exceptions
- Reduce variability between trip plan and actual delivery

Improve efficiency and get the intelligence you need to keep your operations on track.

Visibility is the key to productivity. With highly complex networks and constantly changing variables, knowing where a shipment is (at any point in the supply chain) can help prevent unexpected bottlenecks, movement exceptions and misrouted railcars that often create shipment delays, stock outs, and disrupt plant production.

ShipperConnect Rail Track & Trace is all about visibility—offering a real-time look into rail assets to automate rail operations and enhance supply chain communications and transport. Integrating railcar event data and business intelligence reporting from hundreds of railroads, you get the most up-to-date information about, and can take better control of, your transportation assets and inventory.

The result? Reduced delays and variability. Improved railcar processing. Simplified rail planning and execution. Increased productivity across your entire operation. Addressed bottlenecks identified in traffic performance reports.
