

# mCrew 2.0

## Mobile TMS

### Core Capabilities

- Train crew able to update work in real-time via mobile device from the field
- Yard Management – track to track, station to station movements
- Train management - allows crews to report arrival/departure, pick-ups/set-outs
- Offline/Online – allows train crews to work outside of network coverage, and auto-syncs when with-in Internet coverage

### Differentiating Features

- Work list management enables crews to manage subset of cars within yard or in multiple yards
- New process flow allows for multiple action on same set of cars, minimizing time and effort
- Drop-down dynamic columns and accordion views

### Optimized Outcomes

- Drives train crew productivity by enabling reporting from the field
- Reduces manual processing and errors

**Boost productivity by putting the power of RailConnect TMS directly in the hands of train crew.**

Enable train crews to report train and railcar movements from the field, in real-time. Manage all aspects of your yard and train management. Perform actions using a user-friendly interface with Business Intelligence behind it.

**RailConnect mCrew** is a mobile reporting tool tied to Transportation Management System (TMS) that extends the power from the office to the rail yard and beyond. mCrew is a part of RailConnect System used by more than 450 railroads across North America to manage mission-critical railroad operations, eliminate manual processing and reduce costs.

**The result? Reduced manual errors. Maximized train crew productivity. Lower costs.**
