

RailConnect™ 360

 **Improve efficiency**

# ShipperConnect™ EDI Managed Services

**Broader reach, faster onboarding, increased productivity.**

## CORE CAPABILITIES

- ERP Integration to automate the management of business critical data in customer defined data formats
- EDI translation and routing

## DIFFERENTIATING FEATURES

- Bill of Lading translation (404/204)
- Waybill translation (417)
- Car Location Message (any format)
- Acknowledgment Management
- Manage communications and routing between trading partners

## OPTIMIZED OUTCOMES

- Minimize custom development and expenses
- Reduce operating expenses (EDI platforms)
- Reduce support costs
- Reduce manual errors
- Expedite onboarding time

Managing the Electronic Data Interchange (EDI) messaging process is an expensive, timely and labor intensive requirement for rail shippers. Collecting and formatting numerous EDI messages often requires the daily collaboration of multiple resources spread across multiple business units and teams resulting in the significant loss of productivity and unnecessary operating expenses.

GE Transportation's ShipperConnect EDI Managed Services offers translation and routing services to provide integration and connectivity with business partners, critical business systems, and applications within the ShipperConnect product line. This service provides the ability to convert files to and from any format, enabling customized and non-standard formats to be seamlessly integrated into the standard formats that drive automation and integration. FTP connectivity between GE and the users system provides a seamless managed file transfer for improved operations.

**→ The result?** Reduce administrative costs. Reduce support and development time devoted to EDI management. Onboard trading partners faster.
