Tracker 10 from GE Digital
Increase throughput and accelerate time-to-market in conveyor and assembly manufacturing

Order Execution Management to manage your manufacturing process and production orders

Most manufacturers are challenged with higher demands in extremely competitive environments, which can lead to unplanned downtime and increased costs. Tracker from GE Digital with Order Execution Management is a comprehensive tracking and order execution management system that helps manufacturers raise productivity and cut costs by monitoring and managing the execution of production orders.

Outcomes

- Increase throughput with detailed, continuous information to help you make the best decisions
- Enable faster time-to-market with powerful order execution management capabilities
- Drive higher productivity and lower costs
- Leverage efficient scheduling and routing of materials
- Improve production performance with the ability to manage and adapt to real-time situations on a production floor
- Achieve Lean manufacturing and build right the first time

01 Increase throughput

With Tracker, each serialized item that moves through your production or packaging process can be tracked. You get the detailed, continuous information you need to optimize your manufacturing process while managing inventory levels and locations, scheduling resources and routing materials much more effectively.

02 Implement Lean production

With Order Execution Management, Tracker helps manufacturers and suppliers understand real-time sequence requirements and handle situations that occur on the plant floor when the sequence is broken—enabling manufacturers to build right the first time. It helps facilitate a large reduction in WIP inventories along with finished goods inventories while meeting production targets.

03 Improve Inventory, production orders

Better manage inventory, production orders, and routing materials with detailed data using Tracker. It empowers your operators with real-time information and control of their operations to accommodate a variety of production flow adjustments.

04 Real-time flow management of jobs

Tracker provides the ability to not only track the real-time location of jobs on the production floor, but can be configured to perform routing logic on the movement of jobs throughout the facility. This unique capability allows manufacturers to manage the manufacturing, routing, and delivery of multiple product components into complex product assemblies.

Our latest version also enables High Performance HMI with Web HMI from GE Digital to speed operator actions, offers secure-by-design connectivity and certification management, enhances modeling for repeatability and time savings, and provides the latest operating system and database updates.

Tracker accommodates a variety of production flow adjustments
Tracker 10 from GE Digital
Increase throughput and accelerate time-to-market in conveyor and assembly manufacturing

Features
- Collects data from many automated sensors and readers, including bar codes, RF tags and mechanical tag systems
- Provides graphic screens to display tracking paths and item information, and reflects production control commands
- Maintains detailed data for all jobs in the system, including content, status, location, and production process counts
- Keeps cycle counts, repair information, and carrier/container status online; it accommodates different types of carriers and containers within a system, allowing you to track products even when the manufacturing process transforms them
- Provides routing control of production orders through the production facility
- Collects and tracks product genealogy information

Hardware requirements
- Intel Core 2 Duo 3.0 GHz or better computer.
- A minimum of 4 GB RAM.
- A minimum of 40 GB of free hard drive space.

Software requirements
- One of the following operating systems:
  - Microsoft Windows 10
  - Microsoft Windows Server 2012 and R2
  - Microsoft Windows Server 2008 R2 SP1
  - Microsoft Windows 8 and 8.1
  - Microsoft Windows 7 SP1
- Supported: Microsoft SQL Server 2014, 2012 (11.x), 2008 R2; SQL Express 2014 and 2012; Microsoft Visual Studio 2012.4; Oracle 12C

As a comprehensive tracking and order execution management system, Tracker supports a broad spectrum of critical production capabilities.

Hardware and software requirements are representative and may vary by customer deployment. Please consult the product documentation for more details.

Services
In the world of Industrial Internet of Things (IIoT), organizations are able to optimize productivity, reduce costs, and achieve Operational Excellence. While this is an exciting time for opportunity and growth, it can also bring on new challenges, questions, and uncertainty. No matter where you are on your IIoT journey, GE Digital has the right services offering for you.

Advisory Services  We can help you plan and start your IIoT journey in a way that aligns to your specific business outcomes.

Managed Services  We can help you maintain your critical machines from one of our remote locations around the world using model-based predictive-analytic technology.

Implementation Services  Our team will help develop a collaborative, multi-generational plan that will marry your existing investments to the right process enhancements and technology.

Education Services  We specialize in education services to ensure that you’re leveraging our solutions to the fullest extent with our training and certificate programs.

Accelerations Plans  Let us help by ensuring that your business continues to operate at its highest efficiency, all while mitigating risks to your investments.

Cyber Security Services  Our solutions provide industrial-grade security for a wide range of OT network and application topologies.

About GE
GE (NYSE: GE) is the world’s Digital Industrial Company, transforming industry with software-defined machines and solutions that are connected, responsive and predictive. GE is organized around a global exchange of knowledge, the “GE Store,” through which each business shares and accesses the same technology, markets, structure and intellect. Each invention further fuels innovation and application across our industrial sectors. With people, services, technology and scale, GE delivers better outcomes for customers by speaking the language of industry.
