

Why APM?

Your business is at risk.
In a million different ways.

Chemical manufacturers are facing serious risks in today's ever changing market conditions. These risks can have a negative financial, environmental, and human impact across an organization. However, many of these risk factors start at the production asset-level. That's why leading chemical manufacturers are turning to asset performance management (APM) to help succeed in a digital age.

Safety Risk

Safety of people, equipment, and the environment are critical concerns.

Keeping production assets operating safely will **reduce or eliminate** equipment failures, catastrophic events, and environmental incidents.

Production Risk

Billions are invested globally

in the acquisition, operation, and maintenance of production assets.

Asset failures **routinely cost millions** in reduced production annually.

Workforce Risk

Globally, workers lack the tools to see critical data to understand their assets: the history of the asset, the strategy to manage the asset, the impact should the asset fail, or even the current asset health. This **lack of information** creates significant risk to safety and profitability.

Compliance Risk

In an increasingly regulated world, you must demonstrate the ability to **quickly and easily** manage your physical assets and effectively mitigate risk, resulting in lowered insurance premiums.

Big Data Risk

Your production assets and systems are talking. Are you listening? The ever-increasing numbers of connected devices have created a wave of big data that is overwhelming your systems and people, creating huge risk exposure along with great opportunity. The key to managing this is **effective asset strategies** that give context to data, turning it into actionable information, alerting you to asset health trends or real-time conditions that demand immediate attention.

It's time to become a digital industrial company.
