

# CERius™

Carbon Management Software to measure, manage, and operationalize insights to help reduce carbon emissions.

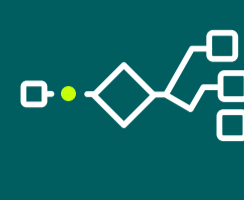

CERius™ is a centralized cloud application designed to automate accurate Greenhouse Gas Emissions (GHG) data collection, provide insights and recommend actions to operationalize carbon abatement plans. Deliver confident data management linked to your net-zero emissions strategy.

Achieve up to 33% improved accuracy in scope 1 GHG emissions calculations

Eliminate spreadsheets, guesses, and late-night audit preparations

Gain a single real-time emissions view across industrial operations

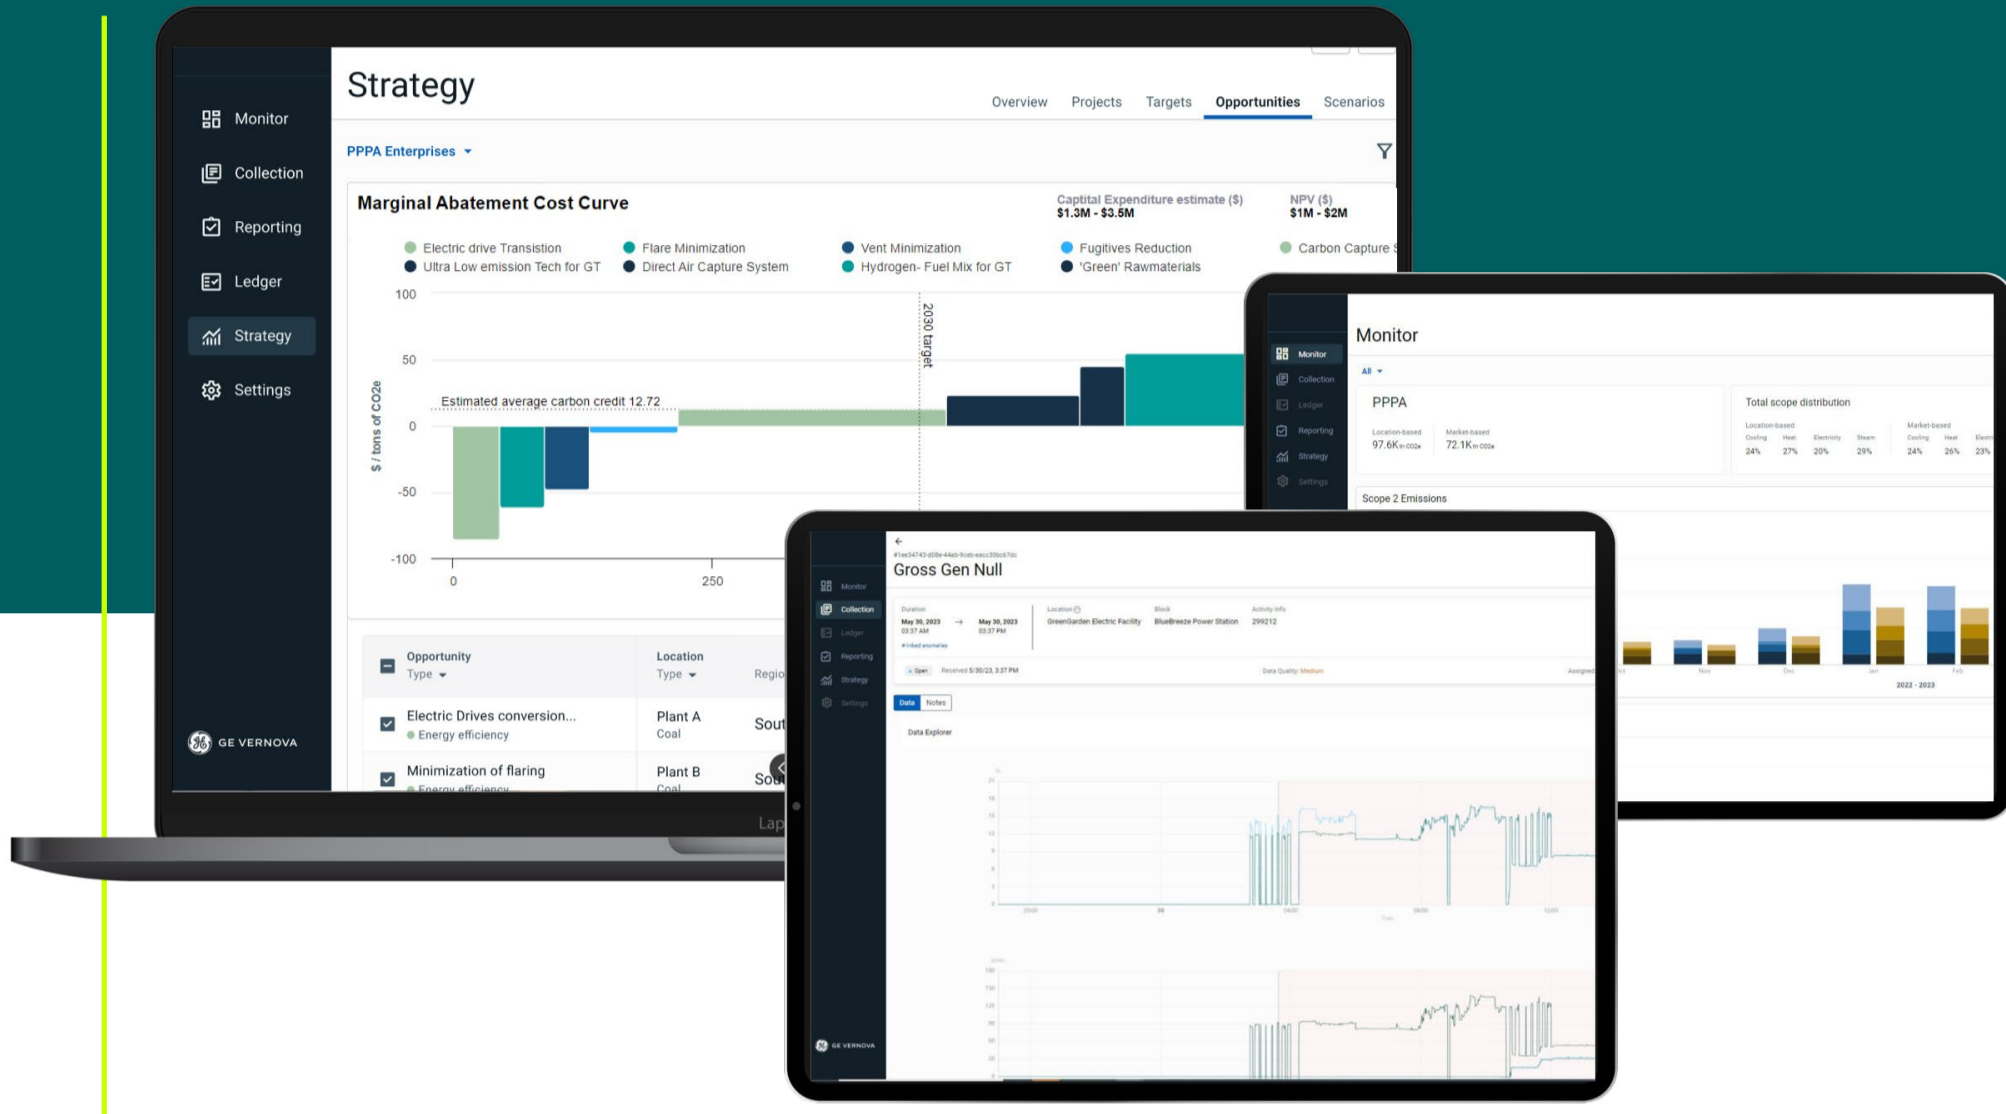

Achieve precise accounting for carbon intensity

Set foundation for future carbon monetization

Build a strategy to achieve your net-zero commitments with confidence

## MODULES & FUNCTIONALITY

### 01 COLLECT

Seamless data collection, cleaning & aggregation

- Configure asset models for scope 1, 2, and 3 data
- Data normalization, reconciliation, and analysis
- Predefined data collection process
- Carbon ledger

### 02 REPORT

Automated carbon accounting & auditability

- Standard processes, view alerts and exceptions
- Data sources projects and events
- Emissions and compliance reporting
- Benchmarking and trends
- Team collaboration

### 03 MONITOR

Powerful visibility into emissions data

- Dashboard and visualizations
- Flexible views and timelines
- Predictive analytics and insights
- Integration into GE's APM & OPM for deeper asset emissions data & operation impacts by asset\*

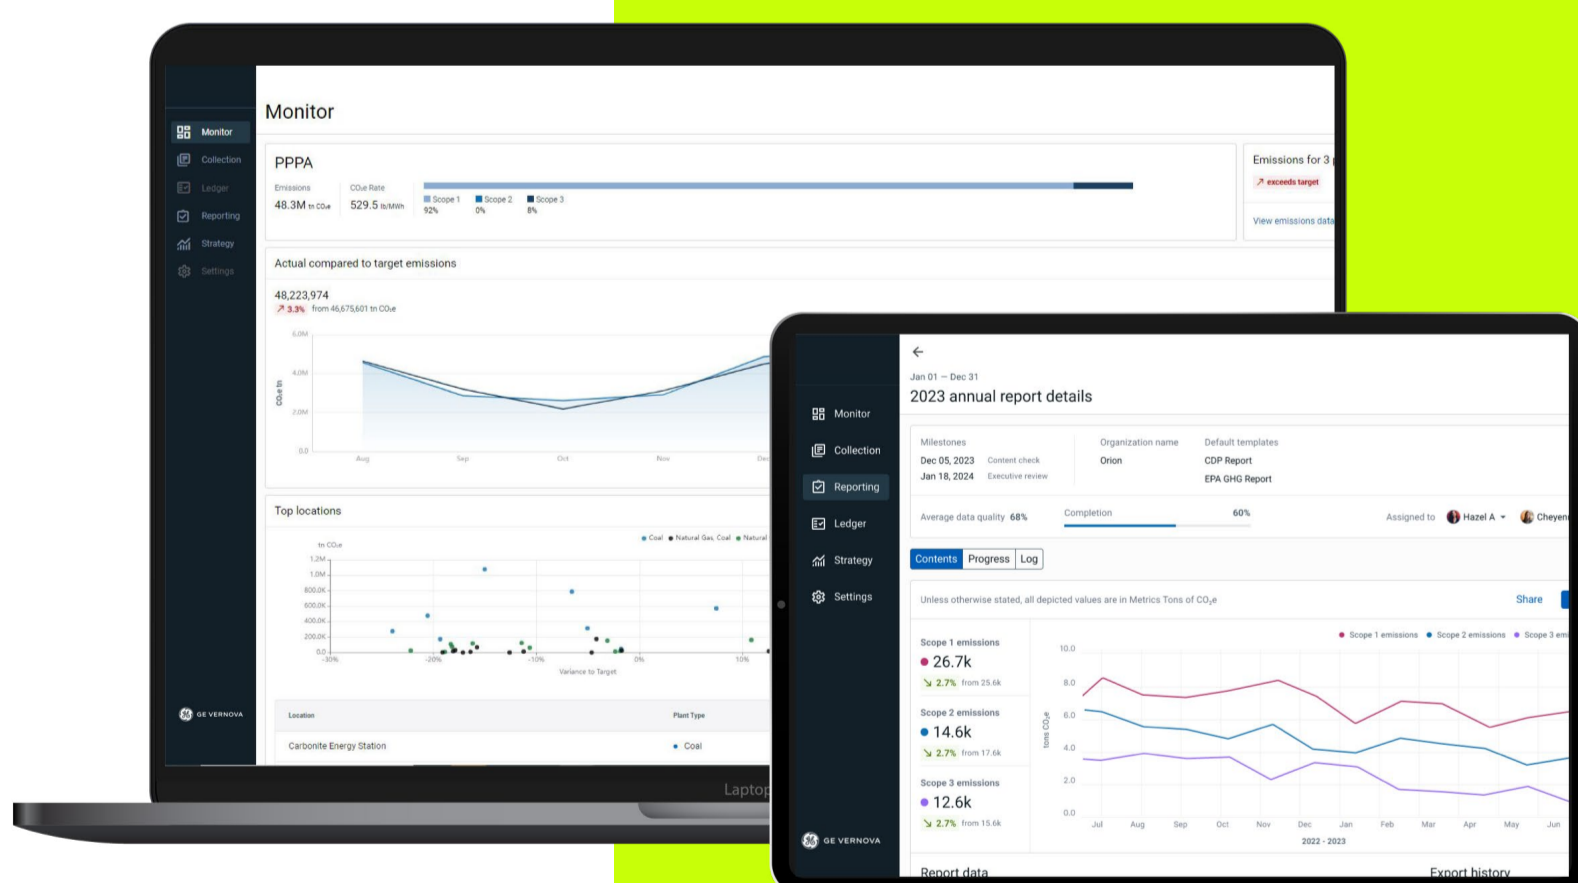

### 04 STRATEGIZE

Decarbonization Planning

- Set baselines and compare historical trends
- Define reduction goals
- Abatement planning and projections
- Project risk management
- Carbon reduction planning

\*Future Application Capabilities

## CONFIDENTLY MANAGE TO NET-ZERO

- Accurate, automated data collection
- Improved reporting & compliance
- Multi-team collaboration
- Scenario analysis & decarbonization roadmap

# DON'T JUST SET TARGETS. MANAGE TO THEM.
