

Are you using the latest CIMPLICITY? Special Upgrade Offer

Take advantage of significant discounts to level-up your software – and even **move from Standard to Pro for free**

Have you seen CIMPLICITY lately? Increase efficiency with our latest and greatest enhancements to date.

CIMPLICITY just keeps getting better and better. If you're not on the latest version (2022), you might be missing out on new capabilities and enhancements to help you:

- Reduce the time it takes to develop and maintain your HMI/SCADA from small to enterprise applications
- Accelerate HMI development
- Manage your applications efficiently
- Empower your operators with a better, more modern experience
- Decrease risk associated with an outdated OS or unsupported CIMPLICITY version that might not have the latest security patches

At GE Digital, we're proud of our latest CIMPLICITY release and understand the importance of upgrading. It's time to level up your CIMPLICITY! We're making it easy with the following special offer.

CIMPLICITY Upgrade Special Offer

Limited-time offer: Ending December 31, 2022

1. If you do not currently have an Acceleration Plan / support, you can receive a 10% discount off the standard upgrade price.
2. If you purchase a 3-year Acceleration Plan term, you can receive a 60% discount off the standard upgrade price.
3. In addition to this special pricing, you have the option to upgrade one of your standard CIMPLICITY Servers to a CIMPLICITY Pro Server at no additional cost.

Contact your GE Digital representative for more information or fill out this [form](#) and specify "CIMPLICITY Upgrade Offer."

Greater Value & Security with New Features

Python Scripting: Python is a powerful language that can enable extensibility of your system. Coupled with CIMPLICITY's open interface and large library of available Python capabilities, you can solve the most complex problems including tying analytics to your equipment, interfacing with business and IT systems, exposing data with MQTT and other IoT protocols, performing complex calculations, and much more.

Cloud Enabled: Host CIMPLICITY in a cloud infrastructure to reduce IT system and maintenance costs. Use the architectural flexibility to suit your business needs.

Discover and Build Capabilities: Discover and browse OPC UA data sources to build out your database automatically, reducing configuration time.

Upgrade to CIMPLICITY Pro Server for Free

Why go Pro? Check out these benefits that improve operations:

Digital Graphic Replay (DGR): Leverage your existing HMI screens and go back in time. You can use your logged historical data to automatically view HMI displays as they were running in the past. Start, stop, rewind, fast forward, or play in slow motion. DGR is useful for troubleshooting issues and quickly resolving.

Action Calendar: Create events based on time to execute scripts or run standard operations through our Classes and Objects.

SPC: With CIMPLICITY's powerful Statistical Process Control, you can ensure processes are running within tolerances. Our SPC tool provides charts and allows you to create quality events and alarms for out-of-spec conditions.

System Sentry (1 CAL): Monitor your software and environments. Receive alerts related to the health of the operating system and software processes in case of failure, out of disk space, and more.

Terminal Services Client (1 CAL): Remotely manage your server using Terminal Services or leverage it for a remote client capability.

Improve operations with the customer-driven innovation in our latest version of CIMPLICITY & GE's modern, powerful HMI/SCADA technology.

Discover how the latest version of CIMPLICITY increases the richness of your HMI/SCADA experience.
