Leading the industry with Unified Operations

Oil and gas industry operations are growing in complexity, as is the demand for operational efficiency. And as technology advances, so does the volume of data—and the need to harness it for useful insights that drive action.

To address these issues, GE collaborated with key customers to develop Unified Operations, a holistic Asset Performance Management (APM) software solution. With enterprise-wide visibility and knowledge management, it allows you to diagnose and solve problems faster, improve asset performance and availability, and maximize profitability.

Greater visibility propels performance.

Through a single pane of glass, Unified Operations provides connected views of the entire fleet. By pooling machine and operational data and utilizing more value from current systems and processes, it simplifies how enterprise-wide data is delivered.

the most relevant experts and information in order to prioritize critical issues (i.e. impending equipment failures) and spend less time on false alarms.

Optimize global performance.

With enhanced visibility and knowledge, Unified Operations allows you to identify best-in-class performance and apply best practices across your entire enterprise. So when one unit performs strongly, so can the rest of the business.

Knowledge management drives efficiency.

Workforce productivity and collaboration improves when the right people have the right information at the right time. With case and knowledge management tools, you can access

About GE
