Manage all renewables and DERs across your grid in an integrated solution using DER Orchestration from GE Digital. Deploy in the cloud or using Edge and take control of DER planning and operations.

Start to forecast the impact that renewables are going to have on your network at any point and time.

Forecast at the transmission level, distribution level and including GIS planning with the same module.

Create a balance between your own assets and third-party assets to optimize performance of the grid.

Create flexibility and visibility

Monetize your DER

Use algorithms to automate situations then predict what will happen

Optimize the Performance of Your Grid

1. Forecasts
2. Centralized Planning
3. Automatic Actions
4. Optimized Performance

How it Works

Innovative Synchronization of DER

Integrated DER Orchestration

A Proven Record

GE Digital’s DER Orchestration solutions have been deployed and scaled globally and been in use in all grid conditions.
