FlightPulse®

FlightPulse from GE Digital Aviation Software puts data in the hands of pilots in a way that hasn't been available to them before. Instead of relying on disconnected data sources to prepare for and review flights, with FlightPulse they have access to data in a digital transfer of information from safety and fuel teams directly to pilots.

$11 billion overspend on fuel across the industry, accounting for 5% of fuel costs

45 FDM events for every 1,000 flights, costing $900 MM to the industry

Inefficiencies cost the airline industry $74 billion worldwide in 2018

Using airline-specific and pilot individualized historical data, FlightPulse allows pilots to access operational information, enabling them to operate safely and efficiently while empowering them to make more informed decisions.
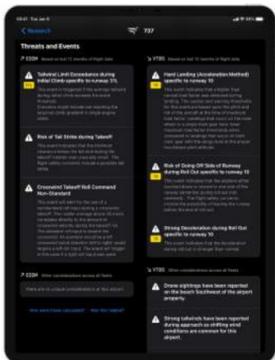

Safety
Familiarize pilots with common threats or events

Efficiency
Understand fuel impacts of operational changes

Mobility
Secured app, private insight at your fingertips
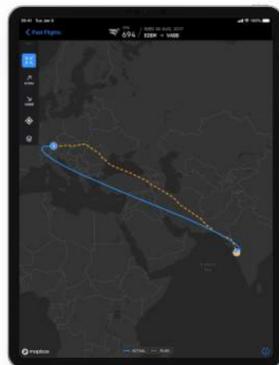

Empowerment
Create self-learning moments and enable continuous improvement
