

# UNLOCK YOUR HIDDEN FACTORY

Realize the full potential of your operations by using data you didn't know you had.

Unlocking the hidden factory is about F&B and CPG manufacturers discovering the full potential within their operations—often hidden in plain sight.

## Learn the 5 keys to making operational data work for you.

Discover how to increase production capacity, drive efficiencies, increase equipment and process reliability and optimize OEE and TEEP, so you can unlock your hidden factory.

See for yourself how GE Vernova has helped its F&B and CPG customers put their data to better use.

### 1. DATA CAPTURE

**A food processor connected 300+ machines with an MES that saves all process data to a database and increased data quality by ~70%.**

You can't make more informed decisions without capturing the right data. Consolidate data from multiple systems and sources throughout your facility to accurately store data from all phases of production.

**A consumer goods manufacturer saved 45 minutes per shift, per line, per business unit with manufacturing operational intelligence.**

### 2. CONTEXTUALIZATION

Enhance your data's contextual value with a standardized system that unifies information across sources. This will allow you to identify root causes and visualize productivity.

### 3. VISUALIZATION

**A national condiment-supply company reduced waste by 50% by driving corrective actions to operators and minimizing overfills during restarts.**

Deliver the right information to the right people at the right time. Call attention to the most important information first to alert decision makers and facilitate fast action.

**A leading UK food company improved OEE by 20% using analytics to identify control loops that cause problems.**

### 4. ANALYTICS

Use tools that work in real-time to deliver deeper insights. Implementing condition-based quality alerts, AI/ML-based process analytics and centerlining approaches can help teams be more proactive and embed a continuous improvement mindset.

### 5. INFORMATION BROADCAST

**A Fortune 500 manufacturer updated its data flow to senior-level leaders, supporting decision making that saved \$500,000 a year.**

Implement a system where information flows both ways—between the plant floor and decision-makers. It serves as a single source of truth and helps gain alignment and buy-in from stakeholders.

## DID YOU KNOW?

Most companies use less than 1%\* of their operational data. Manufacturers who find ways to leverage insights using data they're already collecting have a greater opportunity to capture more market share.
