

Corporate Coalition for Innovation & Technology toward Net Zero

The global transition to cleaner energy sources is underway. Collaboration and partnerships across governments, international organizations and businesses will be needed to achieve the goals of the Paris Agreement and other ambitious targets to reduce emissions while maintaining energy security and reliability. Businesses are rising to the task by working closely with our partners in the public and private sectors and contributing to innovation to simultaneously decarbonize industrial activities while promoting long-term sustainable development.

With the understanding that innovation and technology are fundamental to enabling countries to meet their decarbonization, climate change and sustainable development goals, the undersigned CEOs are proud to join CCITNZ, the **Corporate Coalition for Innovation & Technology toward Net Zero**, as founding members.

CCITNZ intends to serve as an accelerator for industries across sectors and geographies to innovate and develop breakthrough technologies to help achieve these goals. The objectives of CCITNZ include:

- **Innovation and Technology:** Promote concrete, practical and cost-effective technology solutions to tackle emissions and decarbonization challenges;
- **Partnership:** Promote strong partnerships with stakeholders in the private, public and social sectors across international venues and forums to enable solutions beyond what any one stakeholder can realize;
- **Energy Security:** Partner with governments and other stakeholders to advance energy security, decarbonization and sustainable development needs;
- **Policy:** Support sound public policies that are consistent with improving environmental effectiveness and foster innovation; and
- **Resource:** Provide expertise and thought leadership to governments and other stakeholders on technology and innovation as they seek to achieve their decarbonization and climate change goals.

CCITNZ looks forward to joining world leaders at COP27, where countries are convening to make progress on implementation of essential targets to curb emissions. With CCITNZ's shared objectives as our guide, we will host a launch event alongside the U.S. Department of State in Sharm El-Sheikh, Egypt.
